

## Model Development Phase Template

Date	05 July 2024
Team ID	739938
Project Title	Anticipating Business Bankruptcy
Maximum Marks	4 Marks

### Initial Model Training Code, Model Validation and Evaluation Report

The initial model training code will be showcased in the future through a screenshot. The model validation and evaluation report will include classification reports, accuracy, and confusion matrices for multiple models, presented through respective screenshots.

#### Initial Model Training Code:

```
#importing and building svc
from sklearn.svm import SVC
svm= SVC(kernel='rbf',random_state=0)
svm.fit(x_train,y_train)
```

```
y_pred_svc=svm.predict(x_test)
```

```
print('Training Set:',svm.score(x_train,y_train))
print('Testing Set:',svm.score(x_test,y_test))
```

```
accuracy_SVC=svm.score(x_test,y_test)
print('Accuracy_SVM:',accuracy_SVC*100)
```

```
#importing and building decision classifier
!pip install scikit-learn # Install scikit-learn if you haven't already
from sklearn.tree import DecisionTreeClassifier # Import the DecisionTreeClassifier
from sklearn.metrics import r2_score,mean_squared_error,mean_absolute_error
dt = DecisionTreeClassifier() # Now you can create an instance
```

```
dt.fit(x_train,y_train)
```

Python

```
y_pred_dt=dt.predict(x_test)
```

```
print('Training Set: ',dt.score(x_train,y_train))
print('Test Set: ',dt.score(x_test,y_test))
```

```
from sklearn import metrics # Import the metrics module
dt = DecisionTreeClassifier()
print("Accuracy:",metrics.accuracy_score(y_test,y_pred_dt)*100) # Now you can use metrics.accuracy_score
```

```
accuracy_dt=accuracy_score(y_test,y_pred_dt)
print('Accuracy_DT: ', accuracy_dt*100)
```

```
#importing and building random forest
from sklearn.ensemble import RandomForestClassifier
rand_forest= RandomForestClassifier(random_state=42)
rand_forest.fit(x_train,y_train)
```

Python

```
predictionRF=rand_forest .predict(x_test)
#checking the accuracy on the training set
print('Training set :', rand_forest.score(x_train,y_train))
#checking the accuracy on the testing set
print('Testing set :', rand_forest.score(x_test,y_test))
```

Python

```
accuracy_RF=rand_forest.score(x_test, y_test)
print('Accuracy_RF: ', accuracy_RF*100)
```

Python

## Model Validation and Evaluation Report:
